

Dear Friend,
This card has been passed to you to raise awareness of cetaceans (dolphins, whales and porpoises) in captivity.
Dolphins are intelligent mammals who can swim up to 100 miles each day. A tank will never be big enough for them.
Dolphins use echolocation as their main sense. Tank walls and loud noises like music and clapping crowds distress our dolphin friends.
The tricks you see dolphins perform at a show aren't natural. In many cases the dolphin has to do it to get fed. Dolphins look like they are smiling but that is just the design of their jaw. They don't live as long in captivity and should be swimming straight and free in the sea.
Please DON'T BUY A TICKET to dolphin shows and never swim with dolphins in captivity.
Once read, we would like you to pass this on to help us spread the word. You can let us know if you do @sunnysidepri on Twitter.
